FA THATCH ROOF CONSTRUCTION

OUR COMPLETED PROJECTS

Thatch Roof

CONSTRUCTION BROCHURE

Our Thatch Roof and ceiling project collection: cottage roofing, pavilions, garden shelters, thatch finishes and woven bamboo ceilings.

Since 2015 | Pondicherry, India

Company introduction

Natural materials. Thoughtful spaces.

FA Thatch Roof Construction has 10+ years of construction experience. Established in 2015 and based in Pondicherry, India, we design and construct bamboo houses, mud houses, cottages, resorts, farmhouses and thatch roofs.

Roofing & ceiling projects

We welcome enquiries across India and internationally. Project acceptance depends on location, site conditions, scope and feasibility.

Materials & construction method

Inspect & measure

Review the building, supporting frame, spans, roof slopes, exposure, roof surface and site access.

Agree materials & structure

Select natural or synthetic thatch and the supporting frame. Roof geometry and structural members follow the project design.

Coordinate roof details

Resolve fixing, ridge, eaves, weather protection, drainage, fire precautions and safe maintenance access.

Install & finish

Install the selected roof system and bamboo mat or woven ceiling panels where specified, following the agreed fixing requirements.

Handover & care

Review completed details and the maintenance requirements. Roofing and ceiling finishes remain separately identified in the agreed scope.

Roof care & maintenance

Care for your roof

Check roof coverings, ridges, eaves, fixings and drainage. Repair leaks or damaged sections promptly. Follow the selected material supplier's maintenance and fire-safety requirements, with safe access for inspection.

Indicative service life

Company planning estimates: natural thatch 5 years; synthetic thatch 10 years; roof tiles 15-20 years. These are estimates, not warranties. Actual service life varies with materials, installation, exposure and maintenance.
